# TechVision Pvt Ltd

## Job Opening — Senior Python & AI Developer

Location: Mumbai (Hybrid) | Experience: 3–6 Years | CTC: 12–22 LPA | Posted: April 2025

### ABOUT THE COMPANY

TechVision Pvt Ltd is a fast-growing AI product company headquartered in Mumbai. We build intelligent SaaS products for the HR, recruitment, and talent management space. Our flagship product serves 500+ enterprise clients across India and Southeast Asia. We are looking for a passionate Senior Python Developer with strong AI/ML exposure to join our backend engineering team.

### ROLE OVERVIEW

You will be responsible for designing, building, and maintaining the core backend APIs that power our AI-driven recruitment platform. You will work closely with the ML team to integrate language models and vector search capabilities into our products.

### KEY RESPONSIBILITIES

- Design and develop high-performance REST APIs using FastAPI or Flask to support our recruitment SaaS platform
- Integrate large language models (LLMs) such as Groq, OpenAI, or similar into backend services for AI-driven features
- Build and maintain RAG (Retrieval-Augmented Generation) pipelines using FAISS or Pinecone vector databases
- Implement text embedding workflows using SentenceTransformers or similar libraries for semantic search features
- Write and optimise SQL and NoSQL database queries (PostgreSQL, MongoDB, Redis)
- Deploy and maintain services on cloud infrastructure (AWS preferred) using Docker and CI/CD pipelines
- Collaborate with frontend engineers to design clean, well-documented API contracts
- Conduct code reviews and mentor junior developers on best practices
- Write unit tests, integration tests, and maintain 80%+ code coverage
- Participate in sprint planning, technical design discussions, and architecture reviews

### REQUIRED QUALIFICATIONS

- 3–6 years of professional Python development experience
- Strong proficiency in FastAPI or Flask for building production REST APIs
- Hands-on experience with AI/ML integration — LLMs, embeddings, cosine similarity, or RAG pipelines
- Working knowledge of FAISS, Pinecone, or other vector search tools
- Experience with SentenceTransformers or similar text embedding libraries
- Solid understanding of SQL (PostgreSQL preferred) and caching (Redis)
- Experience with Docker and cloud deployment (AWS EC2, S3, or equivalent)
- Familiarity with Git, GitHub Actions, or other CI/CD tools
- Bachelor's degree in Computer Science, Engineering, or equivalent

### NICE TO HAVE

- Experience with LangChain, LlamaIndex, or similar LLM orchestration frameworks
- Prior exposure to recruitment tech, HR tech, or NLP-based products
- AWS certification (Solutions Architect or Developer)
- Open source contributions or a strong GitHub portfolio
- Knowledge of machine learning fundamentals (scikit-learn, model evaluation)

### KEY SKILLS WE ARE LOOKING FOR

| Must Have | Good to Have |
|---|---|
| Python (advanced) | LangChain / LlamaIndex |
| FastAPI / Flask | AWS Certification |
| LLM API Integration | GitHub portfolio |
| FAISS / Vector DBs | NLP domain knowledge |
| SentenceTransformers | Scikit-learn / ML basics |
| PostgreSQL / Redis | MongoDB |
| Docker / CI/CD | Kubernetes |
| Git / GitHub Actions | Open source contributions |

## WHAT WE OFFER

- Competitive salary: 12–22 LPA based on experience
- Hybrid work model — 3 days in office (Mumbai), 2 days remote
- Health insurance for employee and family
- Annual learning budget of Rs 50,000 for courses and certifications
- Flexible working hours and a collaborative engineering culture
- Direct exposure to cutting-edge AI product development

## HOW TO APPLY

Send your updated resume and GitHub profile link to: careers@techvision.ai

Subject line: Application — Senior Python & AI Developer — [Your Name]

*Note for ResumeIQ Demo: This job description is intentionally rich in AI/ML and Python backend keywords (FastAPI, FAISS, SentenceTransformers, RAG, LLM, cosine similarity, Docker, AWS) so that the scoring differences between the three sample resumes are clearly visible in the demo.*
